#### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-8) in the reply filed on 8/18/04 is acknowledged.

Claims 9 thru 12 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 8/18/04.

## **Specification**

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1 thru 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Pradeep et al. 6,468,877 B1. Pradeep discloses (see, for example, FIG. 10) a semiconductor device comprising a gate electrode (gate) 22, source, drain, gate electrode spacer (sidewall film) 60, and air gap (low permittivity region) 46.

Regarding the souce and drain, see column 4, lines 23-26, wherein Pradeep discloses highly doped source and drain implants may be made outboard of gate electrode spacers 60.

Regarding claim 3, see oxide layer (first film) 42 and liner nitride layer (second film) 28".

Regarding claim 5, see oxide layer (first film) 42, and liner nitride layer (third film) 28".

## Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 6 thru 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pradeep '877 B1 as applied to claims 1-5 above, and further in view of Gilton 6,143,611. Pradeep does not disclose a part of a side wall lower portion of said gate is removed to have said low permittivity region formed into a notched shape. However, Gilton discloses (see, for example, column 1, lines 64-column 2, lines 7) oxidizing (removing) the gate edge corners in order to increase the thickness of the gate oxide layer at least at the edges of the gate. Such action reduces gate-to-drain overlap capacitance, strengthens of the gate oxide, relieves electric-field intensity, and reduces of short-channel effects. Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to have a part of a side wall lower portion of said gate is removed to have said low permittivity region formed into a notched shape in order to increase the thickness of the gate dielectric layer at least at the edges of the gate electrode which

Application/Control Number: 10/604,891

reduces gate-to-drain overlap capacitance, strengthens of the gate oxide, relieves electric-field

Page 4

intensity, and reduces of short-channel effects.

INFORMATION ON HOW TO CONTACT THE USPTO

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Eugene Lee whose telephone number is 571-272-1733. The

examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Tom Thomas can be reached on 571-272-1664. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
